DOCKER SETUP

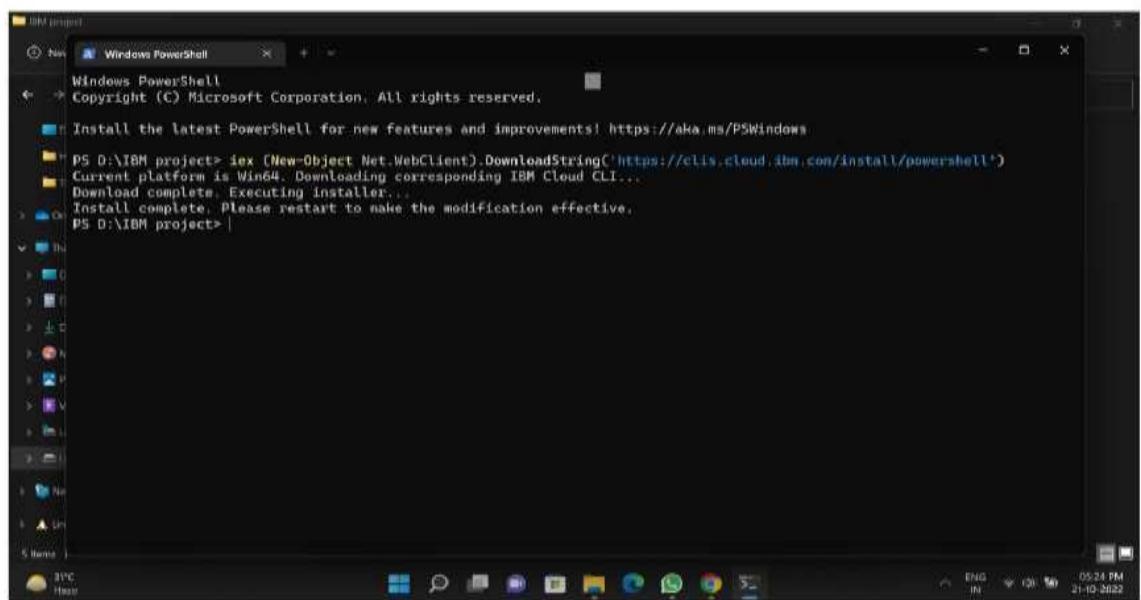

CLOUD

The screenshot shows the IBM Cloud dashboard. At the top, there are navigation links: 'Find developer', 'Upgrade account', 'Create application', and a dropdown menu 'Select an option'. Below the header, there's a section titled 'For you' with several cards:

- Build**: 'Deploy IBM Cloud with this collection of easy-start developer tools and services.'
- Log**: 'Monitor your resources'.
- Set up your IBM Cloud account**: 'Learn how to set up your IBM Cloud account, manage your account settings, organize resources, and control access to those resources.'
- Use Cloud Foundry**: 'Deploy and run your applications and manage services or clusters with Cloud Foundry.'
- Create a Kubernetes cluster**: 'Automate deployment and manage your containerized apps in a native Kubernetes environment.'
- Discover the Watson DevOps of Things (IoT) Platform**: 'Get the code in web console dashboard to monitor your IoT data and analyze that real-time.'
- View APIs and SDKs**: 'View the API and SDK documentation for products and services in IBM Cloud.'
- App Connect**: 'Instantly connect applications, APIs, databases and cloud technologies, via single-line of code App Connect.'

Below these cards, there are sections for 'News', 'Recent support cases', 'Planned maintenance', and 'IBM Cloud status' (which shows a world map with green dots indicating regions). A sidebar on the left lists categories like 'Compute', 'Cloud Foundry', 'Kubernetes', etc.

A Windows PowerShell window titled 'Windows PowerShell' is open, showing the command to install the IBM Cloud CLI:

```
PS D:\IBM project> iex (New-Object Net.WebClient).DownloadString('https://clis.cloud.ibm.com/install/powershell')
```

The output of the command indicates the download and execution of the installer:

```
Current platform is Win64. Downloading corresponding IBM Cloud CLI...
Download complete. Executing installer...
Install complete. Please restart to make the modification effective.
PS D:\IBM project>
```
